25X1

1. The "Azsia" and "Mexiko" workshops of the Diösgyör Iron Works are producing barrels for the following weapons: 37 mm. antiaircraft guns, 57 mm. antitank guns, 85 mm. antiaircraft guns, 76.2 mm. antiaircraft guns, 105 mm. cannons, 122 mm. cannons and howitzers, and 152 mm. howitzers.
2. Raw material comes from the Steel Works in Ozd and from Budapest.
3. Work is usually done on only one type of barrel at a time, usually in series of 1000 pieces. There are about 3000 skilled workers employed at these shops. The machinery is apparently new and modern and includes lathes. The weekly productive capacity of barrels under 100 mm. is about 200 for barrels over 100 mm. about 110 - 120.
4. After the barrels are polished they are packed for shipment. Only about 20 - 25 percent of the product remains in the country and the rest of the barrels are shipped east, presumably to the USSR.
